

How can EnerG Test help you with maintenance, or be compliant with NFPA 70B?

Partnering with a qualified, independent testing company can provide you with the necessary answers, guidance, engineering, and electrical testing to help you evaluate and assess the condition of your equipment. EnerG Test can aid in the development, implementation, and execution of an Electrical Maintenance Program that identifies the sequence of testing and inspections, expected test results, and recommended testing intervals. Our technicians have the training, experience, and education to identify issues, ensure a thorough assessment, and provide follow-up on the corrective actions to validate the repair.

As a NETA-accredited testing organization, EnerG Test offers several benefits:

- Our technicians have broad-based knowledge and are trained to inspect, test, maintain, and calibrate all types of electrical equipment in a broad base of industries.
- We can help ensure your equipment's test results are within applicable standards and manufacturer's tolerances and are suitable for continued service.
- Our certified technicians meet stringent educational and experience requirements outlined in accordance with the ANSI/NETA ETT-2000 Standard for Certification of Electrical Testing Technicians.
- A registered professional engineer reviews all engineering reports.
- All tests will be performed objectively, independent of the manufacturer of the equipment, following the current NETA specifications and using calibrated instruments traceable to the National Institute of Science and Technology (NIST).

We can help you identify the best testing program that provides the best benefit and most value for your maintenance dollar. We partner with you to provide impartial testing of your system. And as a bonus, you'll have the peace of mind, the confidence, and the reports to show all you've done to keep the facility operating.

EnerG Test is here for you!!
